Customer Reviews

I'm a nut for these kinds of books - not because I think the end of the world is coming any time soon, but simply because I love seeing how much I can do for myself, and books like these provide a great means of facilitating that. LOVED the specific instructions on canning, including canning meats. That's a bit of a lost art, and its inclusion here was great! The main reason I didn't give the book five stars was the fact that they didn't go into the same level of detail where energy systems were concerned. It's possible to create your own solar panels and wind turbines, and these would have been HUGE additions to the book, IMO. Likewise, I'd have love to see some sourcing - ie, where you can go to get killer deals on solar panels with blemishes (no change in output, but you can typically buy for fifty cents on the dollar). All in all though, this is a great primer for someone who's interested in the topic but doesn't quite know where to start.

This book covers a lot of stuff that I didn't realize should be covered and is the best book I have read on the topic. From a woman's perspective, ladies, this book can help you understand even more what the guys are talking about, and make you an invaluable member of any group or team.

Maybe living off the grid doesn't appeal to you, it sure doesn't appeal to me. However, surviving a major disaster is something that does and should to you too. This book should be every survivalist's bible. From short-term survival needs to long-term survival essentials this book covers it all. There are many great ideas on how to create shelter whether you are surviving a hurricane or the nuclear holocaust. From expert ideas on how to stockpile and can food to raising the appropriate livestock these tips are sure to keep you alive even in the toughest of conditions. There are also many great ideas that can be used in everyday living, not just in a survivalist environment. There are also great ideas on long-term energy needs using anything from solar to biomass energy. There are many great ideas on how to protect yourself and your family when faced with a bio or a natural disaster. Even if you have never considered living off the grid, you owe to yourself to read this book to learn how to survive through just about any disaster.

I don't consider myself a prepper, but you never know when we'll have an earthquake or a wildfire here in southern California. I learned a few things that I can do easily and cheaply, and that gives me peace of mind.

This was a great read. I appreciate the list of foods to have on hand for one yr per person. It was

also good to know how to garden with results. Thanks
