Customer Reviews

Another wonderful addition to the fundamental series. If you have used the first in this group you will understand the importance of having the complete set. This has a few tips and reminders that are on the first set but expand formulas and skills for the next level. What a great tool to have on hand for quick study and easy access to formulas and explanations. I love the way the steps are easy to follow, and the examples clearly identify how they should be used. I highly recommend this product.

I purchased Math Fundamentals 1-4 for my daughter. Math Fundamentals 2, like the others, is a jam-packed quick reference that she likes to keep in a 3 ring binder in her backpack so it is handy at school and for homework. I anticipate keeping it for a long time as a study guide for class and standardized tests. I also find it useful for myself when helping her with homework, but because of Math Fundamentals' great examples and thorough, easy to understand instructions, I don't think she will need to come to me for much help at all!

I have a 14yr old that I home school and he is having trouble with Math. These charts are very detailed and self explanatory and I would encourage anyone struggling in Math to try these out.

They really do help. The cost is very low and they deliver very very quickly!

I bought these for my daughter, she likes to have it handy when I am not available to help her. It has proven to be useful. I have not noticed if there is any misinformation, as I have not used it much.

As with all the mathematics Bar Charts I have ordered from , this one is a good resource for teachers and students alike. CT

I really have not used this It is great for students. convenient for placing in a notebook, binder or folder, these are laminated

The kids love this. Great for review of the basics of math courses and for working contracts and program management.

Ordered for grand kids, the parents couldn't put it down. Great gift.
